

Last updated: 28 November 2023

(Note: If a UL2272 certified device is not found in the list below, please notify us through www.lta.gov.sg/feedback)

Adoption of the UL2272 Certification for Motorised PMDs

To improve public safety and minimise fire incidents¹, all motorised Personal Mobility Devices (PMDs)² used on public paths must be certified to the UL2272 standard from **1 July 2020**. Retailers are prohibited from selling non-UL2272 certified devices from **1 July 2019**.

While existing owners of non-UL2272 certified motorised PMDs can continue using them on public paths until **end June 2020**, we strongly encourage owners of motorised PMDs to switch to UL2272 certified devices to minimise the risk of fires for their own safety as well as those around them.

Do note that the UL2272 standard addresses the electrical and fire safety risks of PMDs, and does not test for its mechanical safety.

Read on to find out how to tell if a motorised PMD or the device is UL2272 certified.

How do I identify a UL2272 certified device?

Step 1: Recognise the certification mark

In order to be UL2272 certified, each device should be affixed with a certification mark. The table below lists the certification marks recognised by LTA to look out for. The list will be regularly updated if more certification bodies seek accreditation to test and certify devices to the UL2272 standard. You may contact us through www.lta.gov.sg/feedback for queries on the certification marks.

¹ For more information, please refer to clauses 4 and 35 of the Land Transport (Enforcement Measures) Bill at <https://sso.agc.gov.sg/Bills-Supp/29-2018/Published/20180806?DocDate=20180806>.

² This includes e-scooters, which must be registered, and other PMDs such as hoverboards which do not require registration.

Certification body	Certification Mark

Intertek Testing Services (Singapore) Pte Ltd	
SGS	
TUV Rheinland	

Certification body	Certification Mark
TUV SUD	

Step 2: Check the device for the certification mark

Such certification marks can usually be found underneath the footboard of the UL2272 certified device, along with the model number. For unicycles, it may be found underneath the footboard or on the side of the device.

Here are some examples of certification marks found on device labels³:

Please note that devices without the certification marks will not be considered UL2272 certified.

³ Please note that these examples are for illustration purposes only.

Note: This list is non-exhaustive, and is not meant to be an official approval, recommendation or endorsement of any of the devices found on this list. Consumers should make your own assessment based on your needs when purchasing a device.

Do also note that devices found on this list but do not carry any of the recognised certification marks cannot be considered to be certified to the UL2272 standard.
